Introducing the MiniStar2

It's a Kit!

Performance that Puts
Incandescents to Shame!

Bulb OUT-LED IN!!!

Nearly Indestructible!
Never Burns Out!

What is It?

The TerraLUX **MiniStar2** is the brightest LED replacement solution for the highly reliable MiniMag flashlight. This is not a few LEDs thrown into a flashlight. The MiniStar2 combines sophisticated electronics with the brightest 1 full Watt (25 Lumens) Luxeon® emitter LED to yield a high brightness instrument that also gives you **long battery life**.

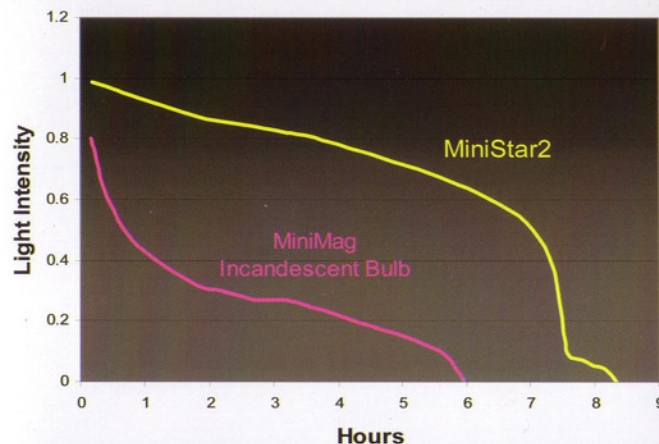

With a rated **100,000 hour life**, we can safely say you'll never need to replace the bulb. More importantly, the color **remains pure white** light regardless of intensity due to the TerraLUX LightEngine, a combination of a custom reflector and electronics that keeps the **light output constant**, regardless of the battery condition. You will get the last possible electron out of your batteries. If there is juice it WILL light!

The MiniStar2 is shockproof, water resistant, and operates over a wide range of battery conditions making it a highly reliable partner to the working professional, - someone who demands the highest performance from his tools.

Why buy the MiniStar2?

If you own a MiniMag flashlight you know the bulb quickly dims as the batteries age and the light changes to a sickly orange color. Usually the bulb burns out after only two sets of batteries. That's why there's a spare in the tail cap!

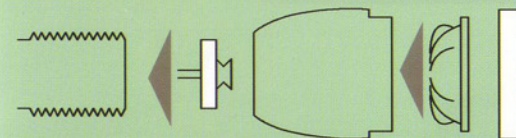

MiniStar2 vs Incandescent Bulb

With the MiniStar2's 100,000 hour lifetime, you'll never need to replace the light again under normal usage. What's more, the batteries will last 6 times longer.

This is because the MiniStar2 incorporates the brightest, 1 Watt LED in the world from LumiLEDs®. We combine this with sophisticated power-management electronics and a custom reflector to form the TerraLUX LightEngine, the smartest lightbulb in the world.

The MiniStar2 kit includes the LED LightEngine bulb replacement and a custom designed reflector. Assembly is easy and takes place in minutes. Take your flashlight head apart as though you are changing the bulb. Remove the reflector and the bulb. Replace with the units supplied.
